Research Associate - Innovations

PlantForm Corporation has an immediate opening in its Special Projects group for a Research Associate - Innovations. The position is available only for protein purification / analytical assay specialists, and tasks will involve extraction and purification of therapeutic proteins from genetically modified tobacco species. Research activities, with emphasis on developing new methods and technology, will be focused on special projects that target protein purification, analysis of recombinant protein expression, and activity analyses.

The successful candidate will have a M.Sc. in biochemistry, engineering or plant biotechnology with 3-5 years' experience, or 0-3 years with a PhD. Pertinent laboratory experience is essential, including chromatography, filtration, HPLC and FPLC; SEC, SDS-PAGE and immunoblot analysis. The position will also require writing reports and technical presentations with complete descriptions of research activities. Prior experience in plant research is an asset.

PlantForm Corp. operates its research laboratories in Guelph, ON, and offers a competitive salary, a benefits program, a stimulating and supportive research team and environment, and room for advancement. The initial position will be for 12 months, with the possibility that the successful candidate may be hired for a full-time technical position within the company.

Interested applicants should provide a cover letter stating research experience, career goals and availability; curriculum vitae; and contact information for three referees.

Only those candidates being invited for an interview will be contacted.
